## SIRIUS modular system. The perfect combination

Switching, protecting, starting and monitoring  
with the highly flexible modular system

[siemens.com/sirius-modular-system](https://www.siemens.com/sirius-modular-system)

## Everything for the control cabinet: the SIRIUS modular system.

Processing, fitting, transporting. These and similar functions run on many automated production lines. With the extensive range of the SIRIUS modular system, you will find everything you need for switching, protecting, starting and monitoring motors.

**Everything. Really easy. With SIRIUS.**

### Contents

The components of the SIRIUS modular system	4
Combination of switching devices and protective devices	8
Convenient means of power supply and distribution	9
Electromechanical switching devices for fuseless assembly of load feeders up to 7.5 kW	10
Size S00 selection and ordering data:	
Motor starter protector, contactor with overload relay	10
Motor starter protector, contactor with current monitoring relay	10
Motor starter protector, soft starter with current monitoring relay	13
Motor starter protector, semiconductor contactor with current monitoring relay	13
Electromechanical switching devices for fuseless assembly of load feeders up to 18.5 kW	16
Size S0 selection and ordering data:	
Motor starter protector, contactor, overload relay	17
Motor starter protector, contactor with current monitoring relay	17
Motor starter protector, soft starter with current monitoring relay	18
Assembly of direct-on-line starters and reversing starters 37 kW	21
Size S2 selection and ordering data:	
Motor starter protector, contactor, overload relay	21
Motor starter protector, contactor with current monitoring relay	21
Assembly of direct-on-line starters and reversing starters up to 55 kW	27
Size S3 selection and ordering data	
Size S6, S10 and S12	31
Selection and ordering data	
Fuseless load feeders	
Selection and ordering data:	
Direct-on-line starters	34
(fully pre-assembled load feeders, compact starters)	
Reversing starters	35
(fully pre-assembled load feeders, compact starters)	
Communication connection	36
(IO-Link/AS-Interface master, contactors, function modules for mounting on 3RT2 contactors and for connecting to the automation level, compact starters)	
Infeed systems	39
For compact starters, load feeders, 3-phase busbar, 8US busbar adapter	
Accessories	
Selection and ordering data:	
Motor starter protectors	42
Contactors	43
Overload relays, current monitoring relays	48

# Everything. Systematically. SIRIUS modular system.

Building control cabinets must be fast, simple, flexible and space-saving. How can all this be achieved? With the unique SIRIUS modular system that offers everything you will need for switching, protecting, and starting motors and systems. In other words, it provides a modular range of standard components up to 250 kW/ 400 V in only seven sizes, which are perfectly matched to one another, can be combined really easily, and largely use the same accessories. That's how easy industrial controls can be!

Continuous further development and regular innovations ensure that our customers are optimally equipped with SIRIUS and benefit from efficient solutions – now and in the future. All the components that make up the SIRIUS modular system are characterized by a space-saving design and a high degree of flexibility. Configuring, installing, wiring and maintenance are extremely easy and time-saving to perform. So no matter whether you want to configure load feeders with motor starter protectors, overload relays, contactors/solid-state contactors or soft starters, SIRIUS has just the product you will need for any application.

Thanks to the latest innovations to the modular system in sizes S00, S0, S2 and S3 up to 115 A, today's SIRIUS modular system shows even more functional diversity.

In addition to the basic components, the innovated SIRIUS modular system offers new, never-before-seen highlights:

- Feeder assemblies that can be plugged in completely without tools thanks to the consistent use of spring-loaded connections in sizes S00 and S0
- 2- and 3-phase 3RR2 monitoring relays for current monitoring for direct mounting on contactors (up to size S2)
- 3RA27 and 3RA28 function modules feature snap-on connection to contactors enabling the easiest possible assembly of direct-on-line starters, reversing starters, and star-delta (wye-delta) starting, and connection to the controller using less wiring via AS-Interface or IO-Link
- 3RB24 overload relay with communication capability, current value transmission, and control of the contactors via IO-Link
- One highlight of the SIRIUS devices is their IE3 and IE4 suitability, so that they are optimally equipped for conversion to the new IE3 and IE4 generation of motors

## At a glance. The components of the SIRIUS modular system offer a host of benefits.

With its wide range of components, the SIRIUS modular system features the most diverse functions for use in the control cabinet, and offers a host of benefits in assembly and handling, in application monitoring, and also in controller interfacing, or when planning and configuring.

### Assembly and handling:

Error prevention and reduced wiring effort – with maximum flexibility

- **Load feeders:** easy to implement up to 250 kW/400 V from standard devices
- **Modular design:** everything fits together and can be combined
- **Variants and sizes:** economical and flexible thanks to 7 compact sizes
- **Accessories:** low variance with uniform accessories
- **Configuration:** fast commissioning, short setting-up times, and simple wiring
- **Mounting:** permanently secure mounting, with screw terminals or simply by plugging in
- **Spring-loaded connection system:** quick and secure connection, vibration-proof, and maintenance-free
- **Reduced wiring:** significant reductions in cable connections thanks to plug-in design and IO-Link or AS-Interface

### Applications at a glance:

Increased operational reliability and system availability

- **Maintenance:** extremely durable, low maintenance, and reliable
- **Application monitoring:** integrated extremely flexibly into the feeder – thanks to monitoring relays for current monitoring
- **IE3/IE4-ready:** With the SIRIUS modular system, we also offer you our familiar reliability when converting to IE3 and IE4 motors

### Connection to the automation level:

Optimal integration into the automation environment

- **Communication:** standardized connection to AS-Interface, IO-Link and PROFIBUS DP possible

### Planning and configuration:

Simplified system planning and documentation

- **Configuration:** easy and fast thanks to extensive CAx data provision
- **Service:** short delivery times even for spare parts thanks to global logistics network
- **Environment:** environmentally friendly production and materials, recyclable
- **Design:** clear, ergonomic design (winner of the iF Product Design Award)
- **Configurator:** for the simplest possible selection of products including accessories
- **Global use:** thanks to comprehensive approvals

# Switching. Protecting. Starting. Monitoring.

## The components of the SIRIUS modular system.

### Much more than ON/OFF: SIRIUS 3RV motor starter protectors

The SIRIUS 3RV motor starter protectors are compact, current-limiting motor starter protectors. They ensure secure disconnection in case of a short-circuit and protect loads and the plant against overloads. They are also suited to functional switching of loads with a low frequency of operation, and for protective separation of the system from the power supply during maintenance work or modifications. For applications over 100 A, SENTRON 3VA circuit breakers are suitable.

### Rugged and reliable: SIRIUS 3RT contactors

Thanks to their extreme ruggedness and outstanding contact reliability, our contactors switch supremely and reliably. In addition, they enable compact control cabinets with high packing density. With integrated ranges of accessories for sizes S00 to S3 as well as S6 to S12, individual function expansions can be implemented with no great effort. In sizes S00 to S3, the contactors even have the auxiliary switches integrated into the enclosure.

### Tripping when things get serious: SIRIUS 3RU and 3RB overload relays

The overload relays of the SIRIUS family are available in thermal and electronic versions, and they are responsible for the inverse-time-delayed overload protection in the main circuit. The SIRIUS 3RB electronic overload relays ensure seamless protection for motors and systems from 0.1 A to 630 A. This current range can be covered with a minimum number of variants thanks to the large setting range.

### Simplest possible application monitoring: SIRIUS 3RR2 current monitoring relays

The SIRIUS current monitoring relays monitor not so much the motor as the entire plant or driven process for overcurrent and undercurrent, wire break, or phase failure. Thus, load shedding or overload of an application, for example, is detected quickly and reported early. The 3RR2 monitoring relay for current monitoring is integrated directly into the load feeder in sizes S00, S0 and S2. Just attach it to the contactor, and click 'n' go.

### Soft starting: SIRIUS 3RW soft starters

The SIRIUS 3RW soft starters offer a complete range that covers all basic performance applications of motor starting. Thus, the benefits of soft starting can be reaped in the most diverse applications up to 315 kW (at 400 V) for simple and economical implementation of optimum machine concepts. Economical and space-saving soft starting can be implemented up to 55 kW (at 400 V) with the compact 3RW30 with two-phase control. The 3RW40 also offers smooth ramp-down as well as integrated intrinsic device protection functions and motor protection functions. The 3RW50 also offer integration into the TIA Portal with optional communication modules and HMI modules. SIRIUS soft starters are available for line voltages up to 600 V – optionally also with thermistor motor protection evaluation.

## Switching. Protecting. Starting. Monitoring. The components of the SIRIUS modular system.

### Master the highest switching frequencies with confidence: SIRIUS 3RF solid-state contactors

SIRIUS solid-state contactors (size S0) for switching motors impress with their almost limitless service life – even under harsh conditions and at high switching frequencies. The three-phase solid-state contactors switch motors completely silently up to 7.5 kW.

A special reversing contactor version enables changing of the direction of rotation of motors up to 3 kW. The compact devices in widths of 45 or 90 mm can be combined with our motor starter protectors, current monitoring relays, or electronic overload relays. For fast and simple assembly of fuseless and fused motor feeders.

### Compact switching and protecting: SIRIUS 3RA6 compact starters and 3RM1 motor starters

Equipped with the functions of a motor starter protector, a contactor, and an electronic overload relay, the 3RA6 compact starter as a direct-on-line or reversing starter up to 32 A offers maximum reliability with minimum variance. There is reduced wiring in the main circuit thanks to the ingeniously simple infeed system, including PE connection. Thanks to the optional AS-Interface or integrated IO-Link interface, 3RA6 compact starters are integrated into the Totally Integrated Automation design concept.

The 3RM1 direct-on-line or reversing starters up to 7 A reduce width even further to one half the previous size, and are thus master space-savers. Fail-safe design versions offer the greatest possible economizing on switching device deployment in safety-related applications.

SIRIUS contactor with spring-loaded terminals

### Faster wiring thanks to integrated spring-loaded terminals

All products with 45-mm widths (S00- and S0-size series) in the main as well as auxiliary and control circuits are available with spring-loaded terminals in addition to the conventional screw terminals. This accelerates device connection, and offers maximum operational safety and reliability. The extremely simple wiring guarantees fast installation. Another advantage is that the gas-tight terminal connection is resistant to shaking and vibration. In addition, you benefit from maximum contact reliability – even under the harshest of conditions. There's no need to subsequently re-tighten the connection terminals (often the usual practice). One particular advantage is that the link modules for direct-on-line, reversing and star-delta (wye-delta) starting are also available with spring-loaded terminals. This enables you to install entire feeders entirely without tools. Spring-loaded terminals in the auxiliary circuit are optionally available in sizes S2 and S3.

SIRIUS contactor with screw terminals

### Maximum flexibility when it comes to connections

All the components of the SIRIUS modular system are, of course, also available with screw terminals for special requirements such as mechanical engineering in the semiconductor industry. In sizes with design widths of 70 mm and larger (i.e. as of size S3), additional possible connection options are available such as for connecting cable terminal lugs to device connection bars, or connecting cables with large cross sections to box terminals.

# Switching. Protecting. Starting. Monitoring. The components of the SIRIUS modular system.

Straight to the point:  
the 3RA21 direct-on-line starter

Phases swapped:  
the 3RA22 reversing starter

Two stages – one start:  
the 3RA24 contactor  
assembly for star-delta start

## Ready for immediate use: pre-wired SIRIUS load feeders

Load feeders start loads with a combination of protection and switching functions. To reduce time and costs, and above all to minimize standstill times, we offer you a wide range of pre-wired starter solutions:

- Direct-on-line starters up to 30 kW and reversing starters up to 15 kW – the right starter combination for all motors – both for standard rail mounting and with 60 mm standard mounting rail adapters.
- Reversing contactor assemblies up to 55 kW – the appropriate combination for reversing duty – for fast rotation direction changes of motors
- Contactor assemblies for star-delta starting up to 90 kW – the solution for starting in stages for reducing start-up current peaks of motors.
- Soft starters – when soft starting and smooth ramp-down are required (in the case of the 3RW40 and 3RW50 even with integral overload protection)

An almost unlimited number of further tested combinations can be assembled easily from the individual components. The following manuals help you to make your selection, and they can be found in the Industry Online Support Portal at <http://support.automation.siemens.com>.

## Convenient power infeed and distribution: SIRIUS 3RV29 and 3RA68 infeed systems.

### Efficient and flexible power distribution

The components of the SIRIUS modular system can be wired extremely flexibly. For sizes S00 and S0, the simplest method is to connect the components via the associated SIRIUS 3RV29 infeed system in each case. Alongside this, the 3RA68 infeed system is available in conjunction with the 3RA6 compact starter – and both connection methods are available optionally for devices with screw and spring-loaded terminals. Individual motor starter protectors, complete load feeders, and compact starters are just clicked into the infeed systems. An entire feeder group is thus supplied with energy without any time-consuming wiring and with no risk of error – just click and go!

Alternatively, you can also use conventional wiring: by means of parallel wiring, 3-phase busbars or 8US busbar adapters

with which SIRIUS load feeders can be mounted directly on a 60 mm busbar system.

These diverse combination options provide you with the most effortless solution to implement your individual control cabinets – simply perfectly tailored to your application.

### Assembly – Highlights

- Consistent use throughout by combining 3RV29 and 3RA68 modules
- New flexibility for installation and expansion
- More free space in the control cabinet – thanks to extremely compact design
- Infeed (3RA68) either on the left or right with conductor cross section up to 70 mm<sup>2</sup>
- Optional wiring channel between the feeders
- Additional integration of further 1-, 2- or 3-pole components via terminal block
- Maximum current carrying capacity of 100 A (3RA68)
- Integration of load feeders with screw and spring-loaded terminals
- High vibration resistance, especially for switching devices with spring-loaded terminals
- Time savings during installation thanks to simple plug-in design
- For 3RA68 infeed system also with PE connection option

24 V DC Us **0**  
 110 – 230 V AC; 110 V DC Us **1**

\*Operation of resistive loads with maximum 10 A

Note: The 3RM1 motor starters do not have integral short-circuit protection. They can be used very effectively in combination with SIRIUS motor starter protectors in group assemblies, for example.

Function modules for IO-Link or AS-i that are mounted on contactors (24 V DC) with communication interface are required for connecting the load feeders to the controller. Depending on the version, these communicate with an IO-Link interface group or any AS-i master. Alternatively, the contactors can be connected to the controller via IO-Link and by means of the 3RB24 overload relay. The 3RR24 current monitoring relays serve to provide optimum current monitoring of the overall system or the driven process.

Typical configuration in the environment of IO-Link
